

## **Number Lines**

## **About These Problems**

A number line is basically a one-dimensional graph. Most problems involve reading data from a number line.

**Question.** If A and P were multiplied which of the following numbers could their product possibly be?

- 1. Q
- 2. C
- 3. D
- 4. E
- 5. B

**Answer. 4**: Since both A and P are below 0 their product must be positive. Since they are both less than one their multiplication must be larger than 1 so E is the only option.
